Weatherproof Electrical Connections...

Help Ensure Trouble-Free Electrical Service.

All loose wires for the lights and switches are enclosed inside plastic looms to protect them against contact wear. Then they are neatly channeled inside the frame rails to the chassis wiring harness where we connect the wires with heat-shrink connectors to seal out moisture and prevent corrosion. A similar heat-shrink connector is used on the end of the liftgate power cable.

The liftgate power cable is enclosed in a PVC pipe that runs the full length of the body, inside the long sill. The PVC protects the cable and makes it easy for change-out if the cable is ever damaged and needs replacement.

For more information about our electrical systems or any other standard U.S. Truck Body quality feature, visit our web site at www.ustruckbody.com or contact us at 1-800-443-0843, by fax at 815-672-1490 or by e-mail at sales@ustruckbody.com.
